Post and Rail Fencing Install Guide

This easy to understand installation information will guide you on your Real-Crete® Post and Rail Fence Selection

On a 'fact finding' tour – to Queensland's Sunshine Coast – some years ago, we were very enthused to find a 'Post and Rail Fence' being used as external fencing to the widely know 'Ramada' Pelican Waters Resort Development. The one main draw back that we could find, was that this fence was made from Timber and we were concerned about its durability. Real-Crete® now manufactures a Concrete 'Post and Rail' fence that is not only durable but captures the authenticity of timber, without its usual problems, and what's more – The Real-Crete® Post and Rail Fence is an Eco Friendly Product, no more chopping down of trees!

Post and Rail Dimensions and Weights

Rail Dimensions

- 2400mm x 225mm x 65mm weight 70kgs approx
(Used for both 2 and 3 rail fences)

Post Sizes

- 2 Post Fence – 1800mm x 200mm x 200mm weight 80kgs approx
- 3 Post Fence – 1800mm x 200mm x 200mm weight 80kgs approx

Real-Crete® Colour Selection

Real-Crete® Post and Rail fencing is only manufactured in Earth Brown.

The colour is chemically bound throughout the concrete mixture at construction time ensuring that the colour is throughout the product – not painted on the outside.

EARTH BROWN

Real-Crete® can also complete the installation for you.

Please note; Colours may vary slightly from sleeper to sleeper due to concrete pouring and curing processes. Due to current printing techniques, colours may vary. We recommend looking at real products to fully understand the colour selection before purchasing.
